# hyss_seqnr_yymmdd_HHMM.log

The file is created in the same folder as info.txt is found. The file is written during simulation with information on progress, warning messages and error messages. In the end simulation performance is printed (similar to the information in simass.txt).

When sequence simulations are made, the *seqnr* is set as an argument when starting HYPE.exe or in filedir.txt. For other simulations the *seqnr* in the file name is 000.
