# hyss\_seqnr\_yymmdd\_HHMM.log

The file is created in the same folder as [info.txt](#) is located. The file is written during simulation with information on progress, warning messages and error messages. In the end simulation performance is printed (similar to the information in [simass.txt](#)).

When sequence simulations are made, the *seqnr* is set as an argument when starting HYPE.exe or in [filedir.txt](#). For other simulations the *seqnr* in the file name is 000.
