

hyss_seqnr_yymmdd_HHMM.log

The file is created in the same folder as [info.txt](#) is located. The file is written during simulation with information on progress, warning messages and error messages. In the end, simulation performance is printed (similar to the information in [simass.txt](#)).

When sequence simulations are made, the *seqnr* is set as an argument when starting HYPE (See [How to run HYPE](#)) or in [filedir.txt](#). For other simulations the *seqnr* in the file name is 000.
