

# hyss\_seqnr\_yymmdd\_HHMM.log

The file is created in the same folder as [info.txt](#) is located. The file is written during simulation with information on progress, warning messages and error messages. In the end, simulation performance is printed (similar to the information in [simass.txt](#)).

If a sequence number (*seqnr*) was given when starting the simulation (see [How to run HYPE](#)), the *seqnr* is used in the file name. For other simulations the *seqnr* is 000.
